

Media Stack Maintenance Guide

This document provides the automated maintenance procedure for your LMDE 7 media server.

1. The Script

Save the following as `~/monthly_maintenance.sh`:

```
#!/bin/bash

# =====
# Monthly Media Stack Maintenance Script
# Purpose: Updates Docker containers, system packages, and prunes unused images
# =====

# Set variables
LOG_FILE="/var/log/monthly_maintenance.log"
DOCKER_DIR="$HOME/docker-media"

echo "--- Maintenance started at $(date) ---" | tee -a "$LOG_FILE"

# 1. Update Docker Containers
echo "[1/4] Updating Docker containers..." | tee -a "$LOG_FILE"
cd "$DOCKER_DIR" || exit
sudo docker compose pull >> "$LOG_FILE" 2>&1
sudo docker compose up -d --remove-orphans >> "$LOG_FILE" 2>&1

# 2. Update System Packages
echo "[2/4] Updating system packages..." | tee -a "$LOG_FILE"
sudo apt update && sudo apt upgrade -y >> "$LOG_FILE" 2>&1
sudo apt autoremove -y >> "$LOG_FILE" 2>&1

# 3. Clean up Docker unused data
echo "[3/4] Pruning unused Docker images..." | tee -a "$LOG_FILE"
sudo docker image prune -a -f >> "$LOG_FILE" 2>&1
```

```
# 4. Finalizing
echo "--- Maintenance complete at $(date). Restarting server... ---" | tee -a
sleep 5
sudo reboot
```

2. Setup Instructions

1. Make it executable: `chmod +x ~/monthly_maintenance.sh`
2. Open cron editor: `sudo crontab -e`
3. Choose **1 (nano)**.
4. Add this line to the end: `0 3 1 * * /home/bkdmedia/
monthly_maintenance.sh > /var/log/
monthly_maintenance.log 2>&1`
5. Save (Ctrl+O) and Exit (Ctrl+X).

Your system will now run this task at **3:00 AM EST on the 1st of every month**.
